Connectomics corpus graph review

Date: 2026-08-24
Screening: IA-007-v3 agent adjudication (complete)
Scope: IA-013 layers (full -> integrated -> integrated+rescue), citation roles, authorship (trim_middle), people, ultra-core and core paper lists, figures

1. Executive summary

Preferred nested corpus views over the v3 inclusive set (core + adjacent + role_bridge):

	Full	Integrated	Integrated+rescue
Inclusive works	1,803	933	1,033
Core	686	529	551
Adjacent	915	377	418
Role bridge	202	27	64
Ultra-core	46	40	46
People (trim_middle)	3,182	1,755	1,951

Integrated = full minus **no_graph** and minus **weak_unlinked** (in = 0 and in+out <= 2).
Integrated+rescue = integrated union high-value **no_graph** reinstatements (ultra OR cites >= 100 OR (core AND cites >= 50)).
Dropped from full to reach integrated: 485 **no_graph** and 385 **weak_unlinked**. Rescue brings back 100 of the **no_graph** papers (including all ultra that were off-graph).
Legacy prime (audit only) = full **weak_unlinked** while **keeping no_graph** -> 1,418 works. Prefer integrated / integrated+rescue for citation-integrated claims (IA-013).
Use full for high-recall audit and periphery review. **Use integrated** for strict graph analyses. **Use integrated+rescue** for checkpoint / curriculum when coverage gaps matter.
Machine-readable lists: `label_ultra_core_ranked.csv` (n=46), `label_core_ranked.csv` (n=686).

2. Shared rules

- 1. **Semantic tiers** from IA-007-v3 agent adjudication (strict nanoscale / synaptic wiring core).
- 2. **Citation graph** is directed and asymmetric; high out/in is normal.

3. **Link strength:** weak_unlinked / weak / moderate / strong (weak if total degree ≤ 2 ; weak_unlinked if also in = 0); no_graph when degrees are undefined.
4. **Authorship trim (trim_middle):** exclude authors whose *only* corpus credit is a single middle-author slot (including middle on a consortium paper when that is their sole inclusion). Consortium middles with other credit elsewhere are kept. First/last weighted higher for community assignment.
5. **ultra_core:** core_relevant AND (citations ≥ 200 OR landmark title AND citations ≥ 100).

3. Screening ladder (v2 -> v3 + IA-013)

Rung	v2	v3 full	Integrated	+rescue
Inclusive	1,912	1,803	933	1,033
core	1,075	686	529	551
ultra_core	65	46	40	46

v3 demotes many v2 false cores (macro MRI, reviews, adjacent biology). Integrated drops both unmeasured (no_graph) and thin (weak_unlinked) attachments; rescue restores coverage-critical no_graph works without claiming they are graph-integrated.

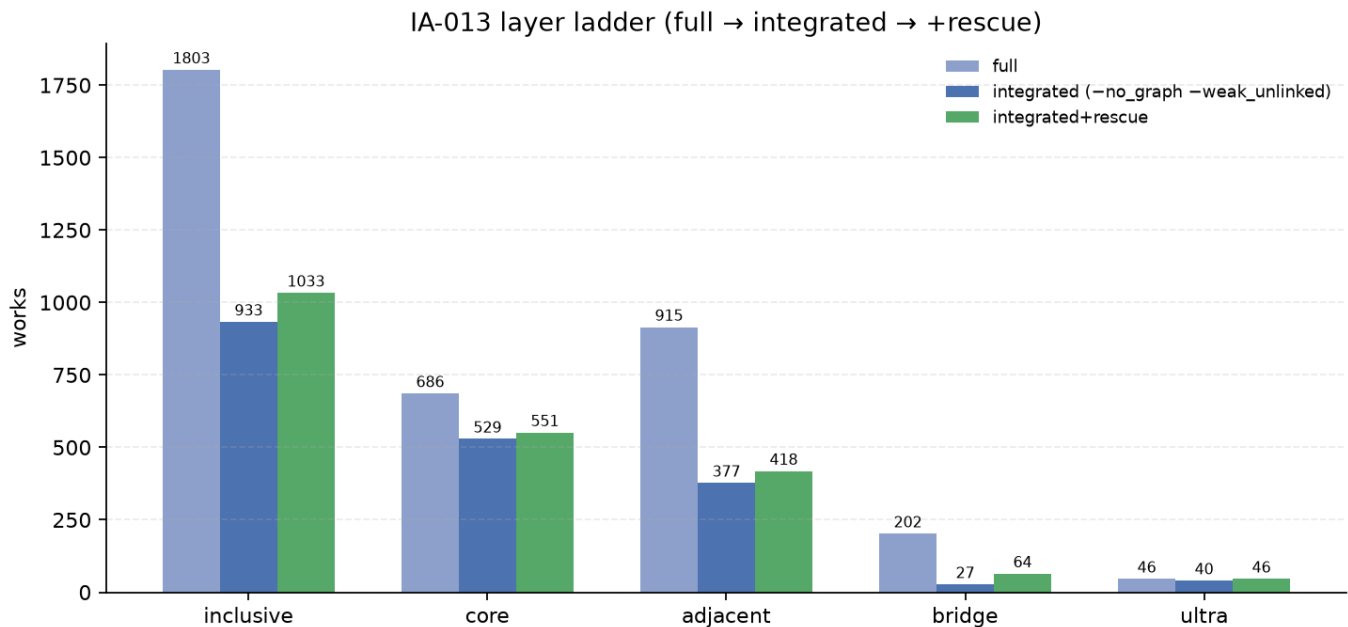

Figure 1: Figure 1. IA-013 layer ladder (full -> integrated -> +rescue)

Figure 1. IA-013 layer ladder (full -> integrated -> +rescue)

4. Citation position by tier

Tier	Full works	Full med total deg	Full weak_unlinked	Full no_graph	Integrated works	+rescue works
core	686	8.0	97	60	529	551
adjacent	915	2.0	274	264	377	418
bridge	202	5.0	14	161	27	64

Citation roles (graph-matched, full view)

Tier	hub	broker	only_out	only_in	isolate
core	25	338	187	37	39
adjacent	2	201	267	85	96
bridge	0	15	16	2	8

Core concentrates brokers/hubs. Adjacent is only-out and weak_unlinked heavy. Bridge is often off-graph.

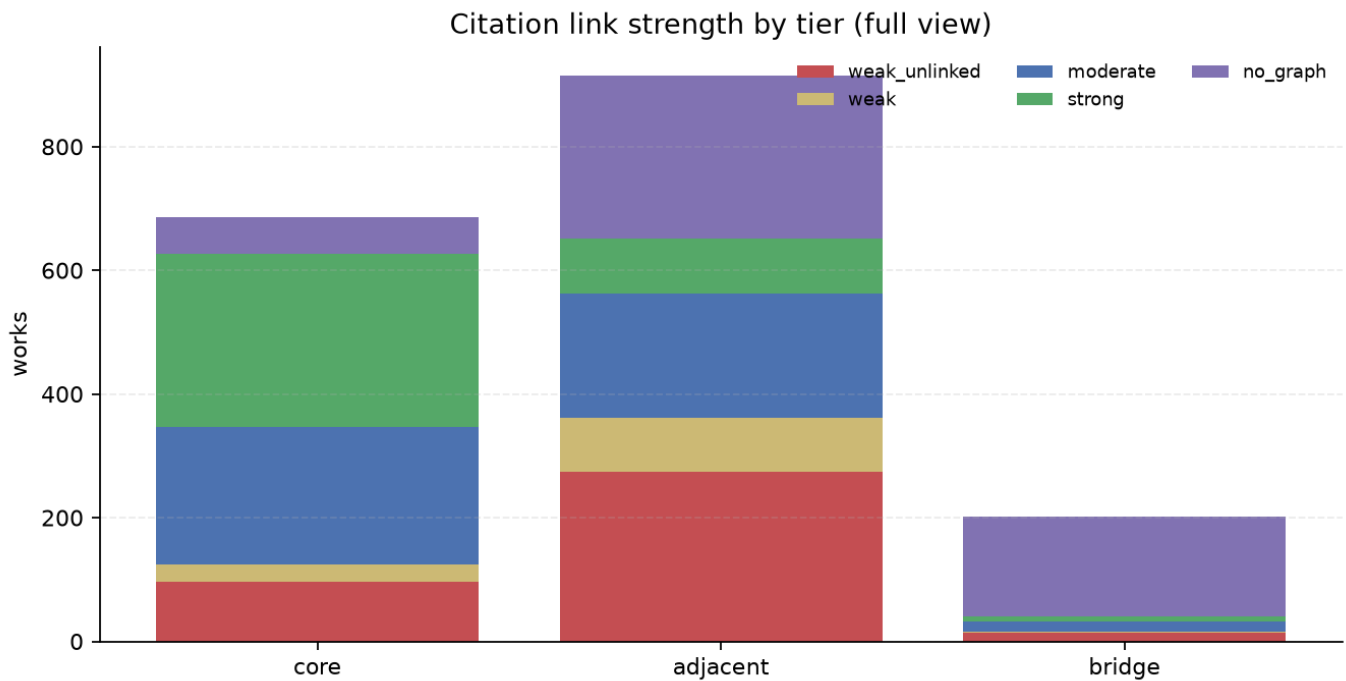

Figure 2: Figure 2. Citation link strength by tier

Figure 2. Citation link strength by tier

Figure 3. Directed citation roles by tier

5. Authorship and communities

	Full	Integrated	+rescue
Coauthor nodes	3182	1755	1951
Coauthor edges	53187	26756	39078
Communities	296	175	186
Persons with first/last	2165	1146	1271
Raw unique bylines	6590	3621	4230
Excluded sole middle-only	3408	1866	2279

Top communities (full)

Community	Works	Core	Adjacent	Ultra
Xiaoyin Chen / Yonggang Wang	353	104	209	3
J. Lichtman / Hanspeter Pfister	240	148	70	15

Figure 6. Core citation in/out degree

6. Interpretation

Full is the high-recall field map: every inclusive paper, annotated with citation role and lab lineage, including thin attachments (**weak_unlinked**) and off-graph papers (**no_graph**).

Integrated is the true citation-integrated spine: drop both **no_graph** and **weak_unlinked**.

Integrated+rescue is the preferred checkpoint when coverage gaps matter: same as integrated, plus flagged high-value **no_graph** reinstatements (not claimed as graph-integrated).

Legacy prime drops only **weak_unlinked** and keeps all **no_graph** - useful as an audit continuity cut, not as the integrated claim.

Recommended use:

1. Checkpoint / curriculum spine -> integrated+rescue core intersect (moderate union strong union ultra union rescued_no_graph).
2. Strict graph analyses -> integrated only.
3. Human review -> full intersect (**weak_unlinked** union unrecovered **no_graph**), especially core.
4. Ultra-core list -> all 46 appear under full and integrated+rescue (40 remain on-graph in strict integrated).
5. Community maps -> prefer integrated+rescue for nanoscale program lineages.

7. People counts

Metric	Full	Integrated	+rescue
Works	1803	933	1033
Author mentions (raw)	13,608	7,786	8,844
Unique persons (raw)	6,590	3,621	4,230
Persons after trim_middle	3,182	1,755	1,951
With first or last credit	2,165	1,146	1,271

Metric	Full	Integrated	+rescue
Sole middle-only excluded	3,408	1,866	2,279
Top-100 floor (min works)	≥ 14	≥ 10	≥ 11
Top-100 median works	20.5	16.0	17.0

Ranking for top 100 by works: works desc, then last-author count, first/single, ultra_core works, core works. Eligible authors only under trim_middle.

Figure 7. Top 20 people (full)

Figure 8. Top 20 people (integrated+rescue)

8. Top 100 people - full corpus (by works)

14. Caveats

- Citation graph covers ~73% of inclusive works; **no_graph** is common for **role_bridge**.
- Prime does not drop **no_graph** - only explicit **weak_unlinked**.
- Coauthor / person reconciliation uses byline strings; not ORCID-complete.
- Consortium threshold = 20 authors.
- This document is an interpretation for offline review, not a preregistered endpoint.

15. Regenerability

```
